Notification of Scheduled Environmental Activities
Former 76 Service Station #4320

To Whom It May Concern::

On behalf of ConocoPhillips, TRC informs you of scheduled, environmental fieldwork to be performed at the Former 76 Service Station # 4320 located at 370 Sebastopol Road, Santa Rosa.

The proposed field activities are scheduled to commence on Tuesday, January 25, 2004 at 11:00 AM with utility locating. Fieldwork will continue on Tuesday, February 1, 2005 at 7:30 AM with the drilling of a monitoring well (MW-3B) onsite and two other offsite monitoring wells (MW-18 & MW-19). The proposed well installation locations are shown on the attached Site Plan. We anticipate that the fieldwork will be completed in approximately three days. Our field personnel and subcontractors will make every possible effort to minimize disruption of operations and any inconvenience at the facility. Soil cuttings and rinsate water generated from the drilling activities will remain onsite in drums for approximately 90 days, pending consideration for proper disposal.

TRC will provide verbal notification to you of the scheduled activities at least 48 hours prior to the commencement of the work. Should you require further information about the scheduled work, please do not hesitate to call me at (925) 688-2487.

Sincerely,

Timothy Johnson
Staff Scientist
